

Tips on Maintenance

The brooch doesn't require any particular maintenance. When you do not use it, keep it in its box. It will protect the brooch from contact with other hard objects and from the impact of light and humidity fluctuations.

To remove fingerprints, you only need to wash it with dishwashing liquid and dry it immediately with a soft paper or tissue.

Like any other gold plated object, with time this brooch will lose its brilliance as well. After being treated by a specialist it will gain back its initial look.
